Executive Summary

The executive summary is a standalone document that is often provided first to a potential investor.

The goal of the executive summary is to get potential investors sufficiently interested in your business opportunity to dig further into your business plan or take a meeting and hear your presentation. Investors see many opportunities so your executive summary must stand out in the first few sentences.

Think of the executive summary as your business plan in two pages. We have adapted the following outline from Guy Kawasaki's Reality Check. The headings cover the components that should be included in the executive summary.

Example: Executive summary outline - Problem: What pressing and important problem are you solving or what opportunity are you addressing?

- Solution: How are you solving this problem or tapping this opportunity?
- Business model: Who are your customers and how will you make money?
- Product and technology: What is your product or technology? What is the underlying magic? What makes your company special?
- Marketing and sales strategy: What is your go-to-market strategy?
- External environment and competition: Who do you compete with? What can you do that they cannot? What can they do that you cannot?
- Financial analysis and projections: What are your financial projections for the next three to five years? What are your key assumptions and metrics to achieve these projections?
- Team: Who is on your team? Why are they special?
- Implementation roadmap: Where are you now? What are the major and immediate milestones?

Since the executive summary is a standalone document, it should be more attractively designed (e.g., colours, graphics, layout) than the rest of the business plan document.

The Problem

Consider the following questions when writing this section: - What is the market your product or service will address? - Is there a particular niche in the market that you should focus on first? - What problem does your product or service address? - How should you price your product or service? - Who are the potential customers? What is their profile? - How will you get the product or service to your customer?

Market Overview

The construction industry is a notoriously slow moving and with few exceptions a laggard in adopting new technologies. While selling a new product is initially hard in this environment, there is huge potential once early adopters have been found. The Canadian Construction Association estimates the value of all approved Canadian building permits to be \$5.85 Billion as of January 2013.

Despite being such a large industry, major general contractors still fail to take full advantage of full electronic document management and approval systems. Many of these general contractors either fail to make use of electronic document tracking, or rely on systems developed within the company. While systems developed within a company are highly customizable, these companies simply do not have the capabilities in-house to develop and maintain systems which take advantage of constantly evolving web technology.

Market Challenges

The construction industry is very stable industry which has exhibited significant growth over the past decade. Statistics Canada estimates that the value of building permits issued across Canada have grown from \$ 24.5 Million in 1995 to \$ 61 Million in 2009. However as the industry grows, assuring internal efficiency does not suffer is critical to remaining competitive. It is because of this growth that a system such as Acknowledgements is critical for large corporations to maintain document approval efficiency across hundreds of concurrent projects.

While large corporations dominate the market, Defence Construction Canada estimated that 90% of construction firms still employ fewer than 20 people. These firms manage few projects at any one time, but organizational efficiency is even more critical due to limit resources. With a slow economy hurting industries across Canada, everyone is looking to streamline their internal processes and come out on top.

Market Opportunity

Positioning itself to help a growing industry that is trying to improve efficiency, Acknowledgements will revolutionize electronic document tracking and approval processes. By migrating processes from traditional paper based systems and bulky in-house developed systems, firms will be able to realize significant improvements in document approval times. These benefits of these efficiencies will greatly outweigh the continuing cost of subscribing to Acknowledgements.

Document is not only a problem for a general contractor, but for all of their dependent partners as well. While a general contractor must coordinate a project, they are constantly managing documents as they move between:

- Clients
- Architects
- Civil Engineers
- Sub-contractors

Coordinating the movement of these documents and their current status in the approval process is a very complicated and time consuming process. By centralizing the state of each document as its is passed between stakeholders, Acknowledgements will greatly simplify this process, without compromising integrity. By performing this coordination via a secure web-based application, each stakeholder will be able to access a unified interface and thus quite literally be “on the same page”.

The Solution

Acknowledgements is a web-based document tracking platform, facilitating secure sharing and approval of technical documents. In a world where liability is paramount, having a clear record of a documents evolution is critical for assuring the safety and integrity of the end product. A simple web interface will allow for systematic approval of a document. The system will allow for collaboration within an organization as well as with external partners, any of whom can sign off on a document throughout its life-cycle.

Acknowledgments differentiates itself from existing solutions by emphasizing simplicity and ease of use. Most solutions on the market are made in-house by companies and are rarely complete, effective or user-friendly. Significant improvements have been made in web application technologies and Acknowledgements will leverage these technologies to simplify the user's experience. User acceptance has been identified as a significant challenge to be overcome by Acknowledgements, and as such a new user must realize the advantages of using Acknowledgements quickly before they become discouraged.

Development

Acknowledgement will primarily be a document management application with the ability to automate document distribution between many parties. This core functionality will be complemented by enhanced security which will allow users to approve documents, while maintaining all industry legal accountability requirements.

The initial release of the product will only contain this core functionality. However each company will have new and unique requirements for Acknowledgements given their specific situation. These additional features (or "modules") will be developed for the company for an additional charge. Once each additional module has been developed, it will also be available to other clients, again for an additional charge. As such the capabilities of Acknowledgements will grow with industry requirements.

Competition

Acknowledgements will be entering an industry largely lacking competition. As such, it will be important to enter the market with a fully developed product that will capture market share quickly. Once a company has adopted Acknowledgements, it will be difficult to switch an application which has become entrenched in the company's work processes, due to employee retraining. As such it will be difficult for an alternative product to enter the market after Acknowledgement and compete with what will have become an industry standard.

Since Acknowledgements will not only be used by general contractors, but also the many third parties working under the general contractor (architects, engineers and sub-contractors), switching applications will only be made more difficult once these third parties adjust to Acknowledgements.

Business Model

A business model describes an organizations value to its customers. It illustrates the capabilities and resources required to create, market and deliver this value and to generate profitable, sustainable revenue streams. The business model is important because it describes how you will make money with your venture.

Most of the information you require to describe your business model will have been developed in Market Strategy Development Workbook 2: Critical Value Factors and Market Strategy Development Workbook 3: Strategic Marketing Approach.

This section should include the following details: - how your business model works - the value proposition - the target market - key partnerships - pricing and positioning - the distribution model

Refer to the information you have documented in Market Strategy Development Workbook 2: Critical Value Factors.

content

Acknowledgement will differentiate itself from existing solutions by developing a product known for enhancing productivity and being creating a “frustration-free” work environment. Acknowledgements will rely heavily on client referrals in the early stages of its development. It is through these referrals that Acknowledgements will leverage its acceptance at a one company to acquire further clients.

Partnerships

Our future involves partnerships with A Small Orange web hosting company, LibreOffice, a software development company and Mint.com, a secure application development company.

1. **Mint.com** will be our first partnership. Security is an important part of our clients’ workflow. Mint.com is experienced in creating secure applications, and they will be able to help us ensure that our application is secure.
2. **A Small Orange** will be our second partner, and will be pursued once our product is done development. All our services will be hosted on their servers. They offer great prices and great services and will be a valuable part of our business.
3. **LibreOffice** will be a long-term partner. Once our product is established with a starting client base, we will expand the offerings of our product to include a fully integrate office suite in our online software.

Distribution

The distribution of Acknowledgements is greatly simplified as a web application. The service will be accessible by multiple clients from a single central location. If a client would prefer to host the service on-site for security or other client-specific reasons. Assuming a client is using the centrally hosted option, the additional cost per client will be negligible during early stages of deployment. Common web hosting solutions are capable of serving hundreds of clients without the need to upgrade. As Acknowledgements grows, distribution costs will increase marginally, but be significantly less than additional client revenue.

While hosting the application centrally will greatly reduce distribution costs, it also increases risk since there will be a single failure point. This risk will be mitigated by utilizing a large hosting company such as Amazon, which allows the deployment of Acknowledgements to be managed centrally, but have redundant hosting centers in case of server failure.

Pricing

While Acknowledgements will become a critical system for the client, they will be initially unaware of their need. As such Acknowledgement's pricing scheme will emphasize initial low entry costs, with costs growing proportionally with the client's dependence on the application. Client revenue is proportional to the size of the company's current contracts. As such the cost of Acknowledgements will increase on a per-project basis. This scheme will be logical to a client since all drawings and other document will all be project specific.

Acknowledgements pricing will therefore be divided into three categories:

- **Trial** - All potential clients will be eligible for a trial of the software, free of charge. During this trial the client will have full application functionality, for the period of the project. The trial will allow a potential client to try the software, with minimal risk.
- **Ongoing Fees** - Upon completion of the trial, the company will be charged a yearly fee based on the current number of projects being managed through Acknowledgements. This pricing scheme will allow company's to slowly adopt Acknowledgements, without large upfront costs. As user acceptance grows, the application will become critical to the client's business model.
- **Extended Functionality** - The development of additional features will possible at any point after the client has become an ongoing Acknowledgements client. Additional features will be available for an upfront development cost in addition to a small ongoing yearly fee.

Product and Technology

Acknowledgements will rely heavily on new web application technologies such as HTML5 and new scripting languages. These tools will allow Acknowledgements to be developed quickly and minimize the cost of additional features. While significant effort was required to implement functionality such as “drag-and-drop” a few years ago, this can not be implemented in minutes with new tools available. These new web technologies will however merely be tool to accomplish the user-friendly interface Acknowledgements will be known for.

Acknowledgements will use dynamic scripting to generate a customized home interface for each user. These customized interfaces will display only the projects and functionality relevant to that user’s job. While additional functionality (given proper permissions) will be easily accessible, the selected core functionality will be all that is readily displayed. By focusing on the user’s experience, Acknowledgements will be able to gain popularity not only impress individuals involved in the procurement process, but gain popularity with the employees who will use Acknowledgements every day. Client loyalty will be critical in not only retaining existing customers, but also soliciting referrals to new potential clients.

Since all document processes will be managed through Acknowledgements, many analytics are possible which are infeasible using paper based systems. In today’s online world, data is currency. Companies using Acknowledgements will be able to leverage collected process data to further streamline their procedures. Acknowledgements will be able to produce analytics identifying trends and outliers at the user, project and even company level. This data can help managers identify bottle-necks in the process and determine the root cause. While these reports can be run manually, Acknowledgements will be monitoring project progress, and will be able to notify a supervisor if a specific task is taking longer than normal for the given company. These unique features will be based on proprietary algorithms which are capable of identifying issues early in their development, so that they can be fixed before the client is severely affected.

Marketing and Sales

Market adoption and sales are the true measures of success. Clearly convey your strategy and tactics to penetrate the market and drive sales. Potential investors want to understand your customer awareness and buying stimulus programs from the customers and salespersons perspective. If you are not currently selling your product, explain your product launch plans. Convince the audience that you have an effective go-to-market strategy that will not break the bank.

Include the following key points: checkmark - What is your go-to-market strategy? - How will you drive market demand for your product? - What is your branding strategy? - What is your pricing strategy? Addressed in Model - What is your marketing communication plan? checkmark - How will you recruit and build your sales force? - What is your distribution plan? Addressed in Model- Who will be your key partners? checkmark - What is your customer retention strategy? checkmark- Who are your largest customers?

Refer to the information you have documented in Market Strategy Development Workbook 2: Critical Value Factors and Market Strategy Development Workbook 3: Strategic Marketing Approach.

Describe your go-to-market strategy in the corresponding section of the Business Planning and Executive Summary workbook template. Use the information from the Market Strategy Development workbook guides that is indicated in the bullet list above.

The Competition

To properly evaluate the competition and find our foothold in the market, table 1 shows our competition profile.

Table 1: Defining the Competition

Compeitor	Type of Competition	
Previously established approval software contracts.	Economic	St

How we Differ from the Competition

We focus on differentiating ourselves from our competitors by providing a product that helps develop a productive and frustration-free work environment. Seeking approval for your work by a higher-up should not be a cumbersome process. Acknowledgements allows users to quickly draft an approval request and send it off in minutes from anywhere.

Every aspect of our software will focus on helping the customer have a hassle-free experience. The interface will be uncluttered and easy to use. Mobile and desktop web applications will allow for your Acknowledgements account to be easily accessible. Finally, our eager team will be available to help create custom functionality to serve the ever-changing needs of our clients.

Our value curve shows visually how we differentiate ourselves from our competition.

Figure 1: Value Curve

Go-to-Market Strategy

Our go-to-market strategy involves obtaining our first clients by August of 2013. Our entire plan from the early stages of development to the revenue-earning phase is detailed in the following figure.

We are planning to enter the product development stage by early May 2013. With our

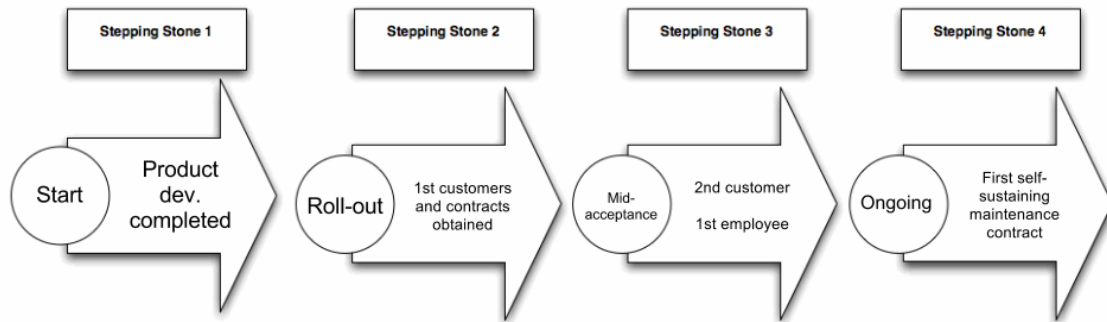

Figure 2: Growth Cycle

experienced team, we will have the product ready for release by mid August 2013.

We will roll-out our product to our first customer by the end of August 2013. Our next set of customers will be obtained by end-of-year 2013.

Once the second customer base is established, we will enter the ongoing phase of our company's growth. Self-sustaining maintenance contracts will be the main source of revenue for the company, and no more funding will be required.

Hiring Cycle

Once **Acknowledgements** has achieved its **Mid-Acceptance** milestone presented in figure 2 we will hire our first employee. As our second customer base is acquired, the extra work will require the additional employee to help maintain the maintenance contracts.

As **Acknowledgements** grows to its **Ongoing** milestone, it will be time to hire new sales staff. Maintenance contracts will makeup the majority of our workbase, and new clients need to be acquired. At this point within our first year, a single sales staff will represent **Acknowledgements** on the market. It will be expected that this staff bring in more clients.

Customer Retention

Customer retention lends itself well to our market. From our reserach, companies tend to invest in a particular approval software solution, and then stick with it. This is exemplified by the problem we are trying to address: Companies have blindly stuck with their unacceptable approval software for years because the hassle of changing was undesirable.

We will capitalize on this mindset by making the migration as easy as possible for our

clients. Then, once they are established with our product, the same mindset will be used to justify staying with our product, with the additional advantage of our product meeting all our our clients' needs in a superior way to their previous solutions.

Target Customers

Our target customers are the major Canadian construction firms. The approval process is entrenched in their company's workflow and it is often the case that the software they use for this task is many years outdated.

Our largest target customers include many of the members of the Canadian Construction Association including:

1. AECON Buildings
2. Hamilton-Halton Construction Association
3. Infrastructure Ontario
4. PCL Constructors Inc.
5. Pennecon Ltd.

External Environment and Competition

This section includes an analysis of the external environment. You can include the Political, Economic, Social and Technology analyses from the Market Strategy Development Workbook 1: The Analytical Foundation.

This part of your business plan also involves a thorough competitive analysis. Provide an overview of the key competitors in the space. Include a description of their products, pricing strategies, go-to-market strategies, and any strategic alliances and partnerships. Articulate the competitive advantage of your business model versus the competition.

A product comparison matrix visually represents how your product fits into the market, your product attributes and how it will beat the competition. Use the following example of a competitive matrix as a guide.

Feature / our company / competitor 1 / 2 table

Refer to the information you have documented in Market Strategy Development Workbook 1: The Analytical Foundation.

Describe the external environment and competition in the corresponding section of the Business Planning and Executive Summary workbook template

Include your PEST analysis in The Business Plan and Executive Summary workbook template.

Complete the competitive matrix included in The Business Plan and Executive Summary workbook template.

Management Team

This section demonstrates that you have a capable, ambitious and trustworthy management team. You may hear investors say that they have invested in a winning team, which they have either worked with before or who have had some prior entrepreneurial successes. Investors will often look for a management team with the following attributes:

- Balance: Depending on the companys stage of development, the management team will contain a mix of technical, sales and marketing experience. The CEO may be the founder or may be hired later as the company gets financing.
- Domain knowledge: Assure the investors that you know your domain deeply at a macro- and at a micro-level.
- Experience: The management teams biographies and CVs should highlight the relevance of their backgrounds to the venture.
- Ambition: Demonstrate that you are aligned with the goal of capital gains. Investors want to see a business that has the potential to scale and that you are prepared to do what is necessary to accomplish this goal.

To read more about how to write great bios for the executive team, see the relevant section in HR Management Workbook 1: Building an A-Team.

Investors also want to understand how you will ramp up your company as you grow and take on financing. Consider including a section that summarizes the key hires over the next 12 to 18 months. The Hiring Calendar in HR Management Building Block 1 is a great supporting tool for this section.

Write an introductory paragraph for each management team member that captures the key points discussed in the corresponding section of the Business Planning and Executive Summary workbook template. Include biographies and CVs in the appendices to the business plan.

Bio 1, Company Title

Bio 2, Company Title

Future Hires

Finances

Cost, revenue and cash flow projections will determine the amount of funding required. Describe plausible, value-enhancing stepping stones and tie them to the sales plan. The business plan should drive the budget, not the other way around.

Your goal is to describe the growth rate of your business, how long it will take to reach

break-even and profitability, resources required to get there, and your funding requirements to achieve your plan. Ideally, you can provide two sales scenarios based on a high and low case to show the sensitivity and range for your plan.

Have your accounting professional prepare your income statement, balance sheet and cash flow. Include them in the corresponding section of the Business Planning and Executive Summary workbook template.

Current status, use of proceeds and milestones

In this section, describe how much money you need, what you will do with the funds, how long the money will last and what value-enhancing milestone the funds provide. If this funding does not provide you cash to profitability, then ensure that the investors understand what value will be created in the company so that you can raise additional financing at a higher valuation.

List your accomplishments, detailed information about how you have financed your organization, the amount of money you would like to raise and how you plan to use the investors cash. This is your implementation roadmap. You can provide this information using the following table format.

Tables: - Sources of Funding - Use of Proceeds

These should align with the financial statements that you have included in the previous section.

Provide investors with the milestones you plan to achieve with the funding and how these milestones will increase the companys value. A timeline is a useful visual representation that details the milestones you will achieve and the funding required to reach those milestones. Consider the following example:

Record the information for your company in the table provided in the Business Plan and Executive Summary workbook template. You will have created a timeline chart as directed in section 4 of Business Planning and Financing Management Workbook 1: Developing a Financing Strategy for Your Company. Retrieve the chart from the Finance Workbook 1 workbook template and include it in the corresponding section of the Business Plan and Executive Summary workbook template.

Risk Analysis

Acknowledgements is positioned to enter a niche market with currently sparse competition. While this may be true now, with success competition is soon to quickly enter the market. As such 3 critical success factors have been identified to assure that **Acknowledgements** evolves into a market leader for technical document tracking and approval.

The industry reputation of **Acknowledgements** will be based on a clean and user-friendly interface which allows a user to easily utilize the powerful and secure management and tracking system that corporations will rely on. As such it will be paramount that all releases of the software are thoroughly tested not only for process integrity, but also ease of use. Many applications are known to have started with a simple and clean interface, only to become cluttered and confusing as functionality is added. User testing and closed loop feedback will be important to not only gaining, but sustaining a reputation as the most productive product on the market.

One of the largest weaknesses of web-applications is server failure. Any down-time will have a significant negative impact on the reputation of **Acknowledgements**. Risk of application down-time will be mitigated by using a distributed hosting service, where **Acknowledgements** is hosted by one company, but in various geographic locations. This will result in a much more robust hosting solution that will be resistant to technological failures or “acts of god”. Another cause of down-time is an application update which causes a critical failure. In order to mitigate this potential issue, all updates will be performed with a full live backup of the previous software release ready to be reinstated. As such, if there is an issue with the update, the old version will be reinstated within minutes of the error being detected. Update cycles will also make use of weekends to assure that updates are performed during periods of minimal application use.

Due to the nature of liability in the construction industry, **Acknowledgements’** approval system will only truly be tested in the event of a catastrophe. It will be during these times that it is critical that **Acknowledgements** is able to produce a full report of exactly which documents were approved by who and in what sequence to assure that liability can be assigned clearly and accurately. Failing to provide an accurate report of the approval process will significantly undermine the reputation of **Acknowledgements** and could immediately put the company’s reputation in disrepute. Integrity testing will be constantly undertaken with projects selected at random. This will assure that any issues are discovered before they come to light.

Risk	Mitigating Strategy
Product does not have required functionality	This possibility has been deemed very unlikely due to the foreseen simplicity of implementation. If the product is not ready according to development schedule, more time will be taken rather than rushing an incomplete product to market.
Client not interested in trying Acknowledgements	Contacts within existing companies will be leveraged to assure the product meets client requirements before release.
The existing market is smaller than anticipated	Thorough market research has proven an existing market for Acknowledgements . Acknowledgements also has a potential market in the manufacturing industry where technical drawings also require constant revisions and approval.
Insufficient funds to develop or sustain Acknowledgements	Development plans minimize development cost to avoid this. Alternative financing will be sought from financial institutions should this occur once clients have been established.
Acknowledgements is the first corporation for this management team.	The Acknowledgement executive team have worked together for years on various initiatives. They will supplement their knowledge with help from industry advisors.
